Product Description

Saniflo Sanicondens

Saniflo Sanicondens SK4 is a small condensate pump that is used to pump condensate from Condensing Boilers, Dehumidifiers and Refrigeration units. The SK4 will also pump condensate water up to 15 feet vertically and/or 150 feet horizontally. Condensate water has the potential to cause property damage or even create health hazards that can affect indoor air quality, when it is not able to drain through gravity to an existing drain line. The Sanicondens can operate at a minimum of 2 - 10 seconds depending upon the discharge pipe run configuration keeping power consumption to a minimum. The discharge connection on the top of the unit comes equipped with a non-return valve, which prevents back flow into the unit. The SK4 is a compact and powerful pumping unit this can be floor or wall mounted. It comes with an auxiliary external overflow switch that will shut down the appliance or alert the consumer in the event of overflow. It also includes all the necessary hardware for ease of installation; 6 m of vinyl tubing, inlet adapter and discharge adapter. **Features:**

- Designed to dispose of acidic condensate
- Option of 4 entry points
- Normal working temperature 35°C
- Max. temperature 80°C for short periods and a minimum pH of 2.5
- For use where a neutralising tray is not required
- Supplied with 2m of electric cable and 6m of drainage pipe
